

Get an instant Telegram message the moment anything important happens — an order fills, a stop-loss moves, a target books, or your broker token is about to expire (so your algos never stop silently). It's a free, one-time setup that takes about 2 minutes.

BEFORE YOU START

- The **Telegram app** on your phone or computer (free).
- You'll create a small personal **bot** that sends the alerts to you — nobody else can see them.
- Have the Stockkar app open at **Settings** → **Telegram Alerts**.

THE 7 STEPS

1

Open BotFather in Telegram

In Telegram's search bar, type **@BotFather** and tap the official one (it has a blue tick). Open the chat.

2

Create your bot

Send the message **/newbot**. BotFather will ask for a **name** (e.g. "Stockkar Alerts") and then a **username** — it must end in **bot** (e.g. `stockkar_alerts_bot`).

3

Copy the bot token

BotFather replies with a **token** that looks like `123456789:ABCdef . . .`. Copy the whole thing — keep it private.

4

Paste the token into Stockkar

In Stockkar go to **Settings** → **Telegram Alerts** and paste it into the **Bot Token** box.

5

Send your bot a message

Open your new bot in Telegram (tap the link BotFather gave you) and send it **any message**, e.g. "hi". This step is required so Stockkar can find you.

6

Detect your Chat ID

Back in Stockkar, click the **Detect** button next to **Chat ID**. Your Chat ID fills in automatically. (If needed, you can paste it manually.)

7

Enable, Save, and Test

Tick "**Enable Telegram alerts**", click **Save**, then click **Send Test Message**. You should receive a test message on Telegram within a few seconds.

✓ YOU'RE DONE!

You'll now get alerts for orders placed, filled or rejected; stop-loss moved to cost; targets booked; trades closed; and safety warnings. Keep **"Alert me when a broker token expires"** ticked (it's on by default) so your algos never stop silently.

IF SOMETHING DOESN'T WORK

- **Detect shows nothing?** Make sure you messaged your bot first (Step 5), then click Detect again.
- **No test message arrived?** Re-check the Bot Token is pasted correctly, and that "Enable" is ticked and you clicked Save.
- **Wrong chat?** Message the bot from the account you want alerts on, then Detect again.
- **Keep your bot token private** — anyone who has it can send messages through your bot.
